Letter from K-State President Kirk Schulz

Dear K-State students,

Welcome to the fall semester! To all of our returning students: welcome back to campus! To all of our new students: welcome to the K-State family!

As you have probably seen, campus resembles a construction zone. We have more than \$250 million in new and renovated building construction underway, which will provide improved classrooms, new laboratories and offices, increased number of spaces for group work and an improved learning environment in general. I ask for your patience as these projects can be disruptive, but be assured a new and improved K-State is on the way.

As I enter my seventh year as K-State president, I would like to share a few suggestions as you start the new school year:

Be involved on campus. We have many opportunities for you to participate and make a difference. Find something that will make your K-State experience meaningful and fun!

Go to class. Go to class. Go to class.

All things in moderation! Ask for help. We have a university full of faculty and staff who want you to be successful. Please ask if you need help in any aspect of your K-State experience.

By the same token, don't hesitate to help your fellow K-Staters. That truly is the Wildcat Way.

Exercise your mind. Go hear a speaker talk about something you don't know anything about. Listen to someone with a different point of view. Challenge yourself intellectually, and you will find that K-State will be a transformational expe-

Be physically active. Go for a walk. Take a bicycle ride. Go to the Chester É. Peters Recreational Complex and lift weights. Take a friend and go play table tennis. Find someway to be physically active.

Wear purple every day! It is going to be a great semester at K-State, and I'm glad to have all of you as students at the nation's first operational land-grant university.

If there is anything I can do to make vour experience even better, please reach out to me at any time!

> Go Cats! Kirk Schulz President

New pedestrian crossing

Denison Avenue's new pedestrian crossing at Goodnow Hall requires those crossing to wait until they get the visual and audible walk signal.

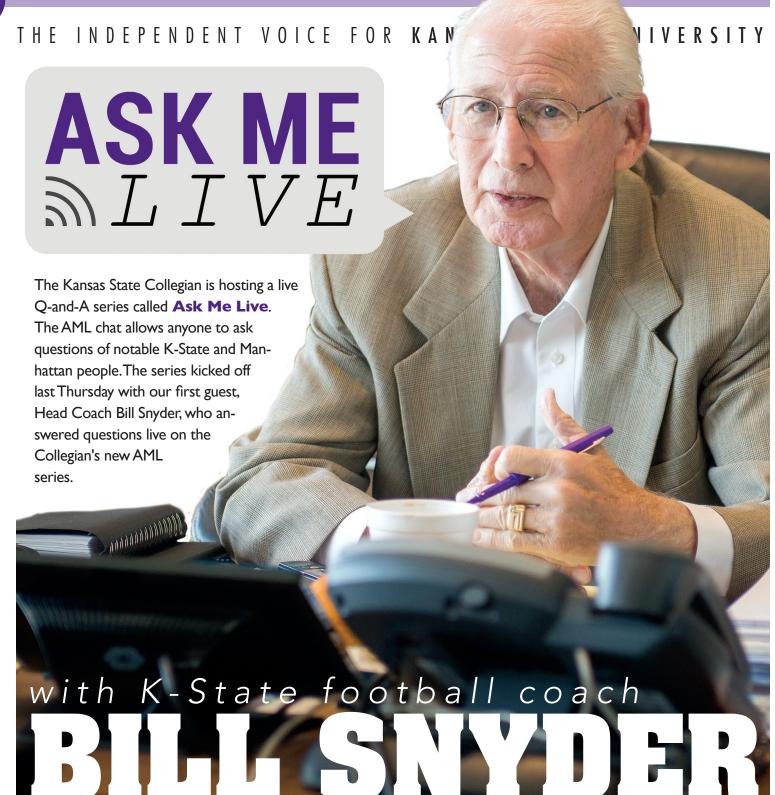

This process is different from the flashing yellow light that happened after you pressed the walk button. It is important to wait for the light to change prior to entering the road way. Vehicles have a traffic light, which will change shortly after the pedestrian presses the button.

It is only safe to cross when the oncoming traffic is stopped, and you, the pedestrian, have the walk sign.

The K-State Police Department will periodically monitor and educate pedestrians at the crossing as the school year starts.

The intersection of Claflin Road and 17th Street is now restricted to authorized vehicles only, which includes emergency and service vehicles. This will be a point of enforcement for the K-State Police.

Donald Stubbings Major-assistant director for K-State Police

JON PARTON THE COLLEGIAN

Q: "WHAT WAS YOUR FIRST CAR, AND DO YOU WISH YOU STILL HAD IT? - KSU'92"

The very first car I had was a vellow 1956 Mercury Convertible. My father bought it for me, and six months later my mother sent it back to my father and asked him not to buy me a car again because I abused the privilege of having an automobile at the age of 16. And yes, I'd love to have it back.

Q: "WHAT IS YOUR FA-**VORITE THING ABOUT** K-STATE?" - WILLIE THE **WILDCAT**

Simple: the people. I love our student body, they've been fantastic supporters of our program for a long period of time. I think they're friendly; I always tell the story about when I first came to Kansas State to determine whether I'd take the position or not.

I went on campus and met with a large number of people. It was the middle of December and

cold on campus, most people being in a big hurry to get inside where it's warm. Students and faculty alike stopped by to talk to me, with no knowledge of who I was. It's a friendly atmosphere.

Q: "HOW MUCH COF-FEE DO YOU DRINK IN A DAY?" - K-STATE STU-**DENT**

Well, I probably fill up 15 or so cups. But I only drink about a half to a third of each one. Still what most people would say too much coffee, but more and more research has been done saying that coffee isn't all that bad for you.

Q: "COACH SNYDER, WHEN YOU FINALLY **DECIDE TO RETIRE IN** 2025, WHAT DO YOU PLAN TO DO WITH YOUR FREE TIME?" - KSU FAN

Well, I will make my No. 1 priority exactly what it is today: my family. We have five children, eight grandchildren and one great-grandchild, and I will spend all the time I possibly can with them.

I'm sure I'll get reinvested in some of the statewide interests that I have; certainty our K-State Leadership Studies program. We have a legacy program I'm involved with right now that I'll continue to be invested in and with the Leadership Studies Program, since it's exceptional and I'm extremely proud of how valuable they've become.

I'll stav active in Kansas Mentors, which Kathleen Sebelius and I started years ago and since have seen 45,000 new mentor-mentee matches, which we're extremely proud of. And the Kansas State University Terry Johnson Cancer Research Center is an important program in our university that I'll continue to support.

Then, the statewide Kansas Leadership Center which is housed in Wichita; I will continue to work to support that. And then the Kansas State Hall of Fame, I'll continue to help with that as well.

Then my wife is always after me to travel, so I'm sure we'll take a trip or two.

O: "AS YOU LOOK **BACK ON A CAREER** THAT WE ALL ADMIRE TREMENDOUSLY, WHAT IS YOUR BEST CAREER **ADVICE FOR UNDER-GRADUATES AT KAN-**SAS STATE?" - TONNIE **MARTINEZ**

photo by George Walker

Well, I'm awfully glad you asked that question. Once again, I think that you have to be true to yourself. In saying that, I think first and foremost it's what we address with our players so often is first, honest self-assessment: to truly define yourself as you really are.

Secondly, I encourage all young people to surround themselves with people who care about them and want/can/will make a positive different in their lives and to seek those people out.

And then, I think it's investing yourself in a value system that you will remain committed to that connects to those 16 goals that you can find anywhere, and really assessing where you sit with your involvement in each of those values.

My encouragement is to honestly assess yourself and if you're lacking in any of those values, find a way to enhance your life with those values. There's a great quote by Calvin Coolidge about perseverance that I greatly encourage everyone embrace.

For more of coach's answers, check out our website www.kstatecollegian.com and stay connected for our next Ask Me Live with Pat Bosco this Wednesday at 9 a.m.

Professors expect more than attendance on first day

SCOTLAND PRESTON THE COLLEGIAN

Walking into your classroom new the first day can be nerve-wracking. professors with new expectations can leave everyone from freshmen to fifth-year students questioning what to an-

ticipate. The first week of school is the time for preparation, according to Kyle Ross, economics instructor.

"Get prepared for how the semester will lay out," Ross said. "Get your schedules all lined up."

For some class-

es, the first week of school is a time to find out when exams are scheduled. Ross also said this is the time to talk to your professors about exam accommodations and conflicts.

everything "Get squared away the first week so we're not scrambling close to the exam,"

Ross said. "Everything works a lot more smoothly the earlier in the semester we get everything taken care of."

Two important keys for the first day are going to class and reading the syllabus. Ross said students often come to him with questions that could easily be answered just by reading the syllabus.

> SEE PAGE 7. "EXPECTATIONS"

File photo by Hannah Hunsinger | THE COLLEGIAN

The first week of school is a great time for students to learn many aspects of the course such as exam accommodations and how the course will run for the upcoming semester.

The Collegian welcomes your letters. We reserve the right to edit submitted letters for clarity, accuracy, space and relevance. A letter intended for publication should be no longer than 350 words and must refer to an article that appeared in the Collegian within the last 10 issues. It must include the author's first and last name, year in school and major. If you are a graduate of K-State, the letter should include your year(s) of graduation and must include the city and state where you live. For a letter to be considered, it must include a phone number where you can be contacted. The number will not be published. Letters can be sent to letters@ kstatecollegian.com

Letters may be rejected if they contain abusive content, lack timeliness, contain vulgarity, profanity or falsehood, promote personal and commercial announce-

ments, repeat comments of letters printed in other issues or contain attachments. The Collegian does not publish open letters, third-party letters or letters that have been sent to other publications or people.

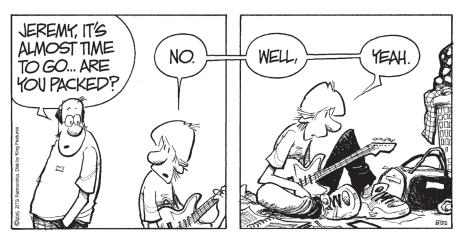

CORRECTIONS

Wildcat volleyball previews season with Purple/White scrimmage

GRANT COHEN THE COLLEGIAN

-State fans received a taste of the 2015 volleyball season during the Purple and White Scrimmage at Ahearn Field House last Friday night.

Both teams won two sets, splitting the match 2-2. Purple won the first set by a score of 25-15 and the third 25-21. White won won the second set by a score of 25-21 and set four 26-24.

The scrimmage was different than playing official regular season games. Head coach Suzie Fritz would often switch the teams up in order to allow for the sets to become more competitive, along with going onto the court to give her players instruction after play had ended.

Friday night's game also provided the opportunity for the players to get the first game jitters out of the way and improve as a team before heading down to Miami this Friday for their season opener against Florida A&M.

"Playing today helped me adjust and get all of the nerves out," freshman middle blocker Macy Flowers said. "It gets away the first game nervousness and keep me calm for when we play in Miami."

Flowers had 10 kills and two blocks for the purple team, while sophomore outside hitter Bryna Vogel added 12 kills and 13

Many of the underclassmen like Flowers, Vogel and freshman outside hitter Alyssa Schultejans, showed the Wildcats that they are going to make tremendous contributions for the team this season.

"I wouldn't consider them role players," Fritz said. "They are all key people. We are going to need to be a team that has tremendous offensive balance.

Junior outside hitter Brooke Sassin played for both purple and white on two sets each, scoring eight kills for the white team and 10 kills off of 22 total attacks for the Purple team.

Sophomore outside hitter, Kylee Zumach, earned 12 kills and 11 digs in three sets for the White team. Zumach switched over to the Purple team in the fourth set and scored two kills off of seven attacks.

Schultejans played three sets for the purple team and had 11 kills and six digs. Playing the fourth set for the white team, Schultejans had a total of 10 kills off of 19 attacks.

"In the last game, our side was getting frustrated because she kept tooling our blocks," junior middle blocker Katie Reininger said. "She was finding a lot of holes in our defense and taking advantage of some really tricky shots.'

K-State was primarily working on improving first swing offense and offensive consistency during the scrimmage and felt that they had made some improvement on Friday

"I thought we were inconsistent a little bit," Fritz said. "When we were good, I thought we were very good. Unfortunately, we weren't holding at a certain level. We have to get ourselves in better situations and continue to fight to be in better offensive rhythm.'

While working on offensive flow, both teams competed to grab the upper hand in the match. After the purple team defeated the white team 25-15 in the first set, no team led by more than four points for the rest of

The match ended in a draw of 2-2 and the excitement keeps on building as the team kicks off their season this Friday in the Hurricane Invitational, playing against Florida A&M. On Saturday, they will take on Illinois State and the University of Miami.

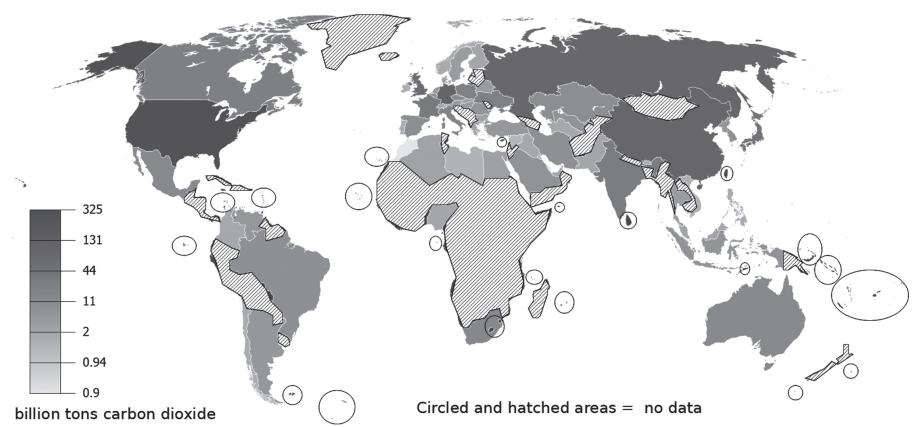

"I thought the team worked really hard," Fritz said. "It was a very competitive scrimmage, and there was some nice surprises in there. We are excited about where we are at right now.'

Climate change's incomprehensible truth

Cumulative energy-related carbon dioxide emissions, 1850-2005

Graphic by Enescot. Licensed under CC BY-SA 3.0 via Wikimedia Commons

Just a few days ago, the National Oceanic and Atmospheric Administration released its latest data, showing that this July was the hottest single month on Earth since official records began in 1880.

It was also revealed by NOAA researchers that, barring a huge unexpected shift, 2015 is set to become the warmest year on record.

If you have any news awareness, you'll know that facts like these just keep coming – heat records keep getting broken. Articles like "July Was The Hottest Month Since Records Began," which ran last Friday on IFLScience, are constantly recurring. The article cites many recent record-breaking heat waves and included quotes like "nine of the 10 hottest months occurred in

the last decade since records began in 1880," and that "the first seven months of 2015 were the hottest January-July period recorded," from

The barrage of similarly alarming articles is not going to stop anytime soon, either, because the Earth is warming.

And that right there – the Earth is warming – is perhaps the most undeservingly-labeled "controversial" phrase of today's time. Global warming is frightening, yes, but it should absolutely not be controver-

Earlier this year, the Pew Research Center released an article titled "Public and Scientists' Views on Science and Society," and their findings revealed some interesting views on this issue. According to their statistics, 87 percent of American Association for the Advancement of Science scientists have said they believe that climate change is mostly caused by human activity; an overwhelming 97 percent have said they believe that climate change is real overall.

Contrasted with the scientists, the Pew results show that only 50 percent of U.S. adults believe climate change is mostly caused by human activity, while a shocking 25 percent said that there was no solid evidence of climate change at all. These are huge, and if the scientists are right, potentially destructive, gaps between the experts and the general public. And they don't end

Another question was proposed in that same Pew report: "Is Climate Change a Problem?" 77 percent of AAAS scientists answered that it was a very serious problem, while 17 percent said that it was a somewhat serious problem. Only six percent said that it was either not too serious a problem, or not a problem.

If we compare that to U.S. adults, we'll find that only 33 percent answered that climate change was a very serious problem, and 32 percent said it was a somewhat serious problem. A combined 35 percent answered that it was not too serious a problem, not a problem, or they didn't know.

Of that 35 percent, however, only two percent said they didn't know or had no response. That means that 33 percent of the U.S. adults recorded said they believed that climate change was not a serious problem or not a problem at all, and were sure enough to say so.

These are dangerous statistics. They mean that one-third of the adult population in this country is not going to get behind collective action to combat this global crisis because they believe there is no global crisis.

What does it say about a society when it disagrees so vehemently with its experts? Are we suffering from a lack of information, from misinformation or do we just not trust science? It is baffling to me ... why would we not trust science?

The evidence on sea level rise, global temperature rise, warming oceans, shrinking ice sheets, declining arctic sea ice, glacial retreat, extreme events, ocean acidification, decreased snow cover and other global phenomena is plain and clear to see. And we're well past the point where denying these facts is not flat out dangerous and irresponsible because it now very much is.

If you are still one of those shocking few that flatly denies any evidence of global warming, manmade or not, despite what the experts are telling you, then I suppose we're done here. This conversation will do no good; you may go. For if you still refuse to submit yourself to fact, then nothing but a literal reversal of the cosmos with the searing Earth instead warming the Sun will convince you otherwise.

Please put this scientific conspiracy out of your mind and continue scraping the side of your (still cold, thank you) freezer, with your best scraping teeth, for an argumentative point ... while our home dies.

For the others who are serious about having an adult conversation about these issues, check back in with the K-State Collegian on Tuesday and Friday as I continue on about the impacts and potential solutions to climate change and also talk about our society's leaders and their collective issues on the topic. If you agree, you'll want to read it. And if you disagree, you'll also want to read it, if only to quietly shake your head at me or very loudly tell me where I'm wrong.

As long as we don't all melt first.

The views and opinions expressed in this column are those of the author and do not necessarily reflect the official policy or position of The Collegian.

Jonathan Greig is a senior in anthropology. Please send comments to opinion@kstatecollegian.

How our cellular technology is helping solve world problems

TYLER GEHMAN THE COLLEGIAN

Cellphones have come a long way very quickly. Big bulky cells whose only purpose was to talk to others seems almost barbaric to many people nowadays. The Art Institute, in their article "The History and Evolution of Cell Phones," detailed its lifespan so far, from their beginning as car phones up until what they

My first experience with a cellphone, that I can remember, is sitting in a class in middle school, flipping it in the air out of boredom. Predictably, it eluded me and smacked to the ground, and the screen stopped working. I tried messing with

the power button, with my friends laughing at me in the background, which didn't work. Finally out of frustration and probably some other things, I threw it back to the floor. If the floor broke it, it could fix it too, you know? And it turned back

As impressive as that cellphone was, they've gotten even more so. The Pew Research Center released an April 1 article titled "U.S. Smartphone Use in 2015," where they reported all kinds of statistics on the smartphone.

The piece in this report that stuck out to me the most was what U.S. users are using their smartphones for. Huge percentage chucks of those surveyed indicated that they used their cellphones for things like getting

information about a health condition, online banking, looking up real estate listings, job information, government services or information, submitting a job application or even taking a class or getting educational content.

No longer are cellphones primarily good for dropping on your face as you look up at them people are increasingly running their entire lives from them.

Pew, in addition to this study, also conducted one on cellphones outside of the U.S. On April 15, they published an article titled "Cell Phones in Africa: Communication Lifeline," which further demonstrates the proliferation and ever-increasing usefulness of cell phones.

The article detailed a huge surge in African cellphone ownership, and it showed that

they are using them for a lot of the same important things we do. Their cat pictures are probably a bit more dangerous to take, but Pew showed a wide use for things like texting, taking pictures, making or receiving payments, reading political news, getting health information, looking or applying for a job and others.

On the same continent, there is yet another important, even revolutionary use for the cellphone. Dan Glickman published an opinion article on June 10, in National Geographic, titled "How Cell Phones Can Help End World Hunger," where he said that "digital infrastructure may be the most powerful tool in battling the worldwide epidemic of malnutrition."

He explains, with details of the people he met on a trip to

Tanzania, that cellphones are being used by farmers to alert and give advice about pest problems, grass selection, preventing livestock infection, weather forecasts, fertilizer prices and more resilient seeds, all of which help these farmers with their livelihoods. And there are, of course, other examples out there in the world of people finding clever, new uses for the pocket-sized super technology in the name of

progress. In this case, Glickman concludes that "more than half of the planet's arable yet unused farmland can be found in Africa, where millions of small farmers lack access to basic infrastructure and information. By empowering small farmers like the women I met in Tanzania with information, and with cellphone

technology, we can raise millions of families out of hunger and poverty."

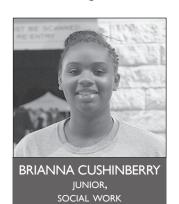

And that, really, ties us back to the Art Institute's article on the evolution of the cellphone. In the article, Patricia Grullon, an Industrial Design instructor at The Art Institute of Fort Lauderdale, said it's not just about how we change the cellphone, but, as Grullon said, "the question is, how will the cellphone change

The views and opinions expressed in this column are those of the author and do not necessarily reflect the official policy or position of The Collegian.

Street Talk

Q: "WHAT ARE YOU MOST LOOKING FORWARD TO FOR THIS UPCOMING SEMESTER?"

"Being more involved with the student body and giving back to the community.

"The new soccer team. It's my favorite sport and it will be a cool program to have at K-State."

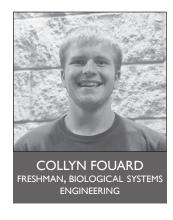

"The football games, man! Also, the atmosphere at Bill Snyder Family Stadium."

FRESHMAN, ANIMAL SCIENCES AND INDUSTRY

"Making 20 new friends a day."

3-D printing used in helping veterinary research

JAMIE TEIXEIRA THE COLLEGIAN

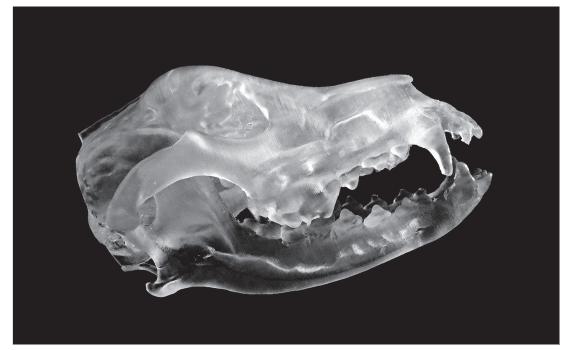

State student, Kelsey Castinado, graduate student in interior architecture and product design, used 3-D printing to help the College of Veterinary Medicine.

Castinado used CT scans of animal bones and turned them into 3-D prints. The prints are used for teaching and even help find better ways to treat animals. The project was part of Castinado's Developing Scholars Program project for 2014-15.

Castinado's mentor, Dustin Headley, assistant professor of interior architecture and product design, was already researching 3-D printing when Castinado asked him to be her mentor on the project.

"I knew that for my third year I wanted to change my research a little bit since I had been doing mostly architecture-based research," Castinado said to K-State News and Communication Services. "I thought product design-based research would be a little bit more interesting, so I asked (Headley) if he needed any help with his research and if he would like to mentor me in the Developing Scholars Program."

The Developing Scholars Pro-

This 3-D model of a dog's skull helped a university veterinarian determine how much growth on the dog's jaw would need to be removed.

gram pairs students with faculty mentors to work on research.

Castinado worked with CT scans provided by the veterinary school to

create the 3-D models. "The digital CT scan files are just a lot of small, chopped up pieces of the bone image," Castinado said to K-State News and Communications Services. "I use a 3-D modeling software to make all those pieces into a whole. I also have to take away all the

extra fragments that are attached to the bone so that when it is 3-D printed, it will look like a bone."

Walter Renberg, professor of clinical sciences and head of small animal surgery at the Veterinary Health Center, told K-State News and Communication Services that Castinado and Headley's work has been beneficial.

"While Kansas State University is not the first to use 3-D printing in veterinary medicine, we've thought about doing so for awhile," Renberg said. "It helps us with a couple of things clinically, particularly with bone deformities... For example, when planning a surgery to correct a deformity or even determining whether such a surgery is necessary, the model can help us determine the right surgical approach or come up with less expensive alternatives to certain procedures."

The 3-D prints have enabled community members to use the veterinary services and save money, but they are also helpful in the classroom. Renberg and Headley are researching the possible advantages of 3-D printing for teaching.

We are looking into the ability to explore soft tissues in 3-D at scale, such as tumors and vascular systems," Headley said. "Such models would have potential to assist in teaching procedures, too."

The 3-D printing could enable the College of Veterinary Medicine to preform more accurate procedures, which has kept costs down for

Once a week, The Collegian will share inspection reports from Manhattan restaurants and businesses. So go ahead and read on, if you dare.

Inspections are compiled from the Kansas Department of Agriculture

IAMIE TEIXEIRA & DANIELLE COOK THE COLLEGIAN

Sonic Drive In 800 N Third St. Date: Aug. 3, 2015 Reason: 02 Follow-up Results: No Follow-up

4-202.11(A)(2) In the make table there was a large white plastic food-grade container with broken edges and being used to store shredded lettuce. Corrected on site: discarded container.

> Bi Bim Bap 702 N 11th St. Date: Aug. 4, 2015 Reason: 01 Routine Results: Follow-up

3-301.11 (C) The cook touched cut or shredded ready-to-eat cabbage with his bare hands. Corrected on site: cooked the cabbage.

6-301.12 There were no disposable paper towels at the hand sink in the kitchen at the time of the inspection. Corrected on site: the person in charge placed some at the sink.

6-301.14 There are no hand-washing signs in the men's or women's restroom. Corrected on site: left two hand-washing stickers

3-402.12 (A) There was no parasite destruction form at the establishment. KDA61 contacted the food supplier. Corrected on site: supplier faxed destruction form to the establishment.

3-302.11 (A)(2) In the make table there was a plastic food grade container of raw chicken in the back of the unit. The cook has to pull the chicken from the back over the two containers of raw beef. Corrected on site: rearranged items. In the walk-in cooler, there was packages of raw beef being stored between packages of raw chicken and a box of raw hard shell eggs. Corrected on site: rearranged items.

4-601.11 (A) On a rack in the ware wash area, there were two plastic food grade containers and a lid with stickers left on

them and stored clean. Corrected on site: discarded.

4-602.11 (E)(4) There is mold inside the pop nozzles at the soda fountain machine. There was also mold on the blue plastic ice scoop inside of the ice machine. Corrected on site: an employee washed, rinsed and sanitized the ice scoop.

3-501.16 (A)(2) In the make table there was an open bag of dumplings at 48.9 degrees. It was being stored on top of food-grade containers in the make table. The person in charge said it has been in the unit since last night (for more than 4 hours). The ambient temperature of the unit is reading 38.3 degrees. Corrected on site: discarded. There was a plastic bowl of cut or shredded cabbage at 54.3 degrees. The person in charge said it has been sitting there since 10:30 a.m. today (less than four hours). Corrected on site: cooked. In the front display cooler, there was a ceramic plate of raw tuna at 46.4 degrees. An employee said he placed it in the unit around 10:30 a.m. today. He has opened and closed the doors during usage (less than four hours). The ambient temperature of the unit is reading 39.2 degrees. Corrected on site: kept the doors closed.

3-501.19 (A)(1)(a) There were no written procedures for the Sushi rice. The person in charge said they are using time as a public health control and discard the sushi rice and sushi rolls every four hours. Corrected on site: explained to the person in charge that they need to keep a written procedure and record

3-305.11 (A)(1) There was a bag of flour and a bag of sugar being stored directly on the floor. Corrected on site: an employee placed them on a

4-903.11 (A) In the storage room there were two boxes of carry out containers being stored directly on the floor. Corrected on site: an employee placed them on a crate.

4-903.11 (B) On a rack above the microwave, there were foam to-go containers facing up with no overhead protection. Corrected on site: inverted.

4-904.11 (B) In a plastic divider tray next to the rice cooker, there were metal spoons not facing the same direction. Corrected on site: an employee placed all handles in one direc-

4-502.13 (A) There were single-service plastic cups being stored in bags of rice, salt and potato flour and in a bucket of soy sauce. Corrected on site: discarded

4-101.11 (A) In the Pepsi reach-in-cooler, there was a cardboard box in direct contact with cooked crab ragoons. There were also two tan plastic non-food grade tubs in direct contact with cooked breaded lemon chicken and crab ragoons. Corrected on site: the person in charge placed all food items in food-grade metal con-

4-302.14 There were no chlorine test strips available at the time of the inspection.

4-601.11 (C) There is dust build up on the fan blowers inside of the walk-in cooler. There is built-up dried food debris on the handles of the make table and reach-in cooler.

5-202.12 (A) The hot water was turned off at the hand sink in the kitchen. There is a slow leak from the faucet. The person in charge said they turn it off at night and turn it on when they open the next day. Corrected on site: the person in charge turned the hot water on and it reached a 100 degrees.

5-202.14 The atmospheric vacuum breaker on the mop sink leaks when water is supplied. A black hose was attached to the faucet nozzle and the end of the hose was hanging below the flood rim (this could cause back-siphonage or contamination). Corrected on site: hung hose above the flood rim.

5-205.15 (B) The atmospheric vacuum breaker leaks when water is supplied. At the mop sink, the faucet and handles are pulled from the wall allowing the faucet head to hand below the flood rim. The faucet leaks water when the water is shut off at the hand sink in the

6-501.11 There are broken floor tiles behind the stove and fryer and in the storage

Kansas Democrat chairman resigns

JAMIE TEIXEIRA THE COLLEGIAN

Larry Meeker, Kansas Democratic Party chairman, stepped down just hours before the beginning of the DemoFest convention in Wichita Aug. 21.

Meeker resigned following pushback over his comment about rebranding the message the state party presents. He said he would suggest emphasizing that the state party is much more conservative than the national party.

"We're looking to re-message how we speak about our party and our issues,' Meeker said about rebranding the party on Wednesday, according to the Wichita Eagle. "At the end of election cycle, as you well know, we are Nancy Pelosi, Harry Reid, Obamacare, Obama, anything bad they can figure out going on in Washington, and the Republicans brand us. That's not who we are. Kansas Democrats are very different from Massachusetts Democrats or California Democrats."

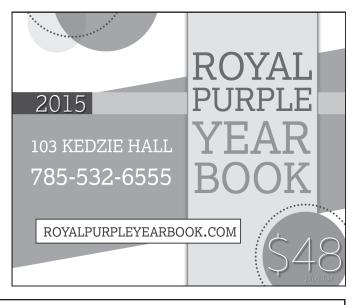

Meeker's suggestions raised heavy criticism and offended many party members. Tom Witt, executive directory of Equality Kansas and a member of the party, said he disagreed with Meeker's views about broadening the platform to sway on edge conservative members. Witt said Meeker should read the party's platform and review its goals.

"I look forward to supporting a chair who will support our party's platform," Witt said to the Lawrence Journal-World Friday. While some party mem-

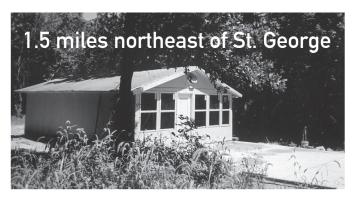

bers criticized Meeker, others said they understood Meeker's intentions. "It's just a fact of political

life," Democratic Sen. David Haley, of Kansas City, Kansas, said to the Wichita Eagle. "The Kansas Democratic Party in its core values is more conservative on various issues than the national Democratic Party.'

The committee will meet Oct. 3 in Salina to select a new chairperson. First Vice Chair Kathryn Focke, of Manhattan, will serve as interim chair until then.

Chemistry: one key for K-State volleyball team

File Photo by George Walker | THE COLLEGIAN

K-State outside hitter **Kylee Zumach** pulls back to hit the ball during the game against KU on Nov. 12, 2014 at Ahearn Field House. K-State was swept by Kansas 3-0.

GRANT COHEN THE COLLEGIAN

fter finishing fifth in the Big 12 last year, the women's volleyball team ended their successful season with a 22-9 overall record and an appearance in the NCAA tournament.

Even with the loss of five seniors, K-State returns experienced players and talented newcomers to the court.

"(The team) has really matured." head coach Suzie Fritz said. "We had some nice surprises and some players who put in the time and the work this summer. It is showing in the way they are playing."

Leading the charge will be sophomore outside hitter Kylee Zumach. Earning the first individual conference honor since 2007 with Big 12 Freshman of the Year award in 2014, Zumach led the Wildcats in kills with a total of 412 last season, averaging 3.59

The 2014 first team Big 12 mem-

ber also produced 449 points on de-

Coming into this season, Zumach said she realizes that a bigger spotlight is pointed in her direction this season than when she was a freshman.

"I'm more motivated to do well this year now that more people know my name," Zumach said.

K-State also returns the other Wildcat to receive Big 12 first team honors last season, junior setter Katie Brand. Brand led the Wildcats in assists last season, averaging 10.98 assists per set on 1,274 total assists.

As one of the leaders for the Wildcats, Brand said that one of their many strengths this season is how strong their team chemistry is.

"We talked a lot about our team chemistry," Brand said. "We did a lot of team building activities during the summer. Just in our two-a-days, we have seen it all come together."

Juniors Brooke Sassin and Katie Reininger will provide the Wildcats with an added spark on the attacking end, combining for 1,516 attacks in 2014, as well as on the defensive end.

Reininger blocked 130 balls last season, averaging over one block per set, while Sassin had 81 digs in the Wildcat's 31 matches.

Fritz said she has seen a tremendous amount of work ethic from each one of her players. Adding that on with experience, the team knows this will come as a benefit when they exceed all of their expectations.

"We have some athletes on our team that have played quite a bit," Fritz said. "I am really enjoying their maturity in terms of their approach and how they are working.

K-State plays a grinding schedule of both conference and nonconference matches, in which eight of those teams made the NCAA tournament in 2014.

"You have to go and test yourself," Fritz said. "We are trying to improve in every and all ways each game.'

K-State will open their season against Florida A&M this Friday in the Miami Invitational Tournament. The Wildcats will have their home opener on Sept. 4 against Green Bay at Bramlage Coliseum.

Hold Baylor accountable for their negligence

Scandal hit the college football world after it was announced Baylor University defensive end Sam Ukwuachu was indicted on two counts of sexual assault against a fellow Baylor student

While the assault is enough to cause a stir around the country, new details were revealed that made the situation even more disturbing.

Ukwuachu already had a history of violence against women that led to his dismissal from Boise State University when he transferred to Baylor after his freshman vear.

Boise State head coach Chris Petersen claimed he

informed Baylor head coach Art Briles of Ukwuachu's past before Baylor accepted his transfer. Briles said Petersen never relayed specific information, but that Petersen only described depression

and home sickness. After the assault took place, Baylor made no effort to remove Ukwuachu from classes that he shared with the victim during the investigation.

According to Texas Monthly, the victim, who had been diagnosed with post-traumatic stress disorder, had to change her own schedule so she did not have sit in classes and study halls with

Even with all of that in the rearview mirror, Baylor defensive coordinator Phil Bennett said a little more than two months ago that he expected Ukwuachu to join the team in July after having sat out the entire previous season due to "some issues," according to Bennett.

Of course, since the indictment, that has all changed.

Ukwuachu is no longer a part of the Baylor football team. Briles and his staff are fresh off a preseason number four ranking

in the AP poll, the highest preseason ranking in school history, and are revving up to take on old Southwest Conference foe SMU in a Friday season opener on Sept. 4.

Soon college football, something that brings excitement and fun, will come in like the storm it is and slowly drive all of this negativity away.

The justice system has already held Ukwuachu accountable for his despicableness, sentencing him to 10 years of felony probation, 180 days of jail time and 400 hours of community serivce.

However, regardless of whether Briles knew about Ukwuachu's violent past, Baylor should be held accountable for their treatment of the victim.

One could hope that Ukwuachu will feel the pain, torment and humiliation that has been felt by his victim during his stint in prison; however, the odds of that are extremely unlikely.

"I will never be the same. I'm no longer the soccer player or the social girl. I'm not even ____," the victim, whose name was redacted from the quote,

said. "I'm just the girl who got raped."

Ukwuachu dehumanized the victim when he assaulted her. Baylor affirmed that dehumanization by not taking stronger action to protect the victim after the initial harm had been done.

A shining example of adding insult to injury.

On top of that, the victim also lost her scholarship after the assault. While the reason is not clear, her father said the assault hindered her ability to recover from a knee injury and contributed to her losing her scholarship.

At the very least, Baylor is guilty of abusing the trust of a student athlete who thought that the team, the athletic department and the school was on her

That's what anyone in that situation would feel. Unfortunately, that's not what happened. And, to put it bluntly, that's just a damn shame.

EXPECTATIONS | More than 'cheek in the seat'

CONTINUED FROM PAGE |

Going to the first day of class is not just an expectation from professors. K-State has an attendance policy stating that "an instructor may drop a student from any or all components ... of a course if the student is absent at the beginning of the first class period of any component of the course."

Another question students often have walking into class is whether their professors expect

them to come prepared with their textbooks. Ross Jensby, K-State alum, said he believes younger students in college tend to be more prepared out of na-

"Once you realize not all textbooks are created equal as far as passing the class is concerned, you'll put off buying your books until a week into the semester," Jensby said.

Jensby said the first day of class is when you figure out how necessary the textbook really is. He said he had experiences in his undergraduate career where professors actually asked who had bought the book, which can be a sign to go out and buy it.

"It sometimes creates the awkward showdown with a professor asking who has bought the book," Jensby said. "I think one professor actually made us hold our books in the air.'

That being said, professors expect more of students than simply attending class with your textbook on the first, or any day,

during the semester. "They expect more than

just a cheek in the seat," Pat Bosco, vice president for student life and dean of students, said. "Our professors, who are some of the most prepared, caring and brilliant you would find anywhere, expect you to be in the moment, engaged and focused, personally committed to being open to new ideas, having the strength to be challenged and willingness to be taken outside your comfort zone."
